YORDIN HERRERA BORGE

Junior Data Science Engineer | Full-Stack Developer

Naranjo, Costa Rica · +506 6258-1978 · borge.yordin@icloud.com · Portfolio · LinkedIn · GitHub

PROFESSIONAL SUMMARY

Junior Data Engineer and Full-Stack Developer with hands-on experience building data pipelines, RESTful APIs, and production-ready web applications. Proficient in Python, PostgreSQL, Docker, and React/TypeScript. Designed and deployed cloud-hosted systems integrating ETL workflows, JWT-secured backends, and ML inference pipelines. Currently pursuing a B.S. in Data Science Engineering at LEAD University (exp. 2027), seeking an entry-level or internship role in data engineering or backend development.

TECHNICAL SKILLS

Languages: Python (advanced), JavaScript/TypeScript, SQL, HTML/CSS, Bash

Data Engineering: ETL Development, Data Validation, Pandas, NumPy, Structured Logging, CSV/JSON Processing

Databases: PostgreSQL (queries, joins, aggregations, relational modeling), SQL optimization, Neon (cloud)

Backend & APIs: Flask, FastAPI, Node.js/Express, REST API design, JWT authentication, bcrypt, Modular Architecture

Frontend: React, TypeScript, Vite, Tailwind CSS, Streamlit

Cloud & DevOps: Docker (containerization), Render, Railway, GitHub Actions (CI/CD), Git & GitHub

Machine Learning: ONNX Runtime, MediaPipe, OpenCV, ML inference pipelines, rembg

Methodologies: Agile/Scrum (academic), RESTful design, Modular architecture, Environment-based configuration

PROFESSIONAL EXPERIENCE

IT Support Technician | Librería Cristal *Jan 2022 – Present*

- Delivered Tier 1 and Tier 2 technical support for 15+ workstations, maintaining system uptime across all critical hardware.
- Reduced equipment downtime through scheduled preventive maintenance of desktops, laptops, and printing systems — estimated 20% reduction in reactive repair calls.
- Designed and installed network infrastructure (routers, switches, Ethernet cabling, printers) for a multi-workstation environment.
- Configured server settings and implemented IP addressing and network segmentation best practices.
- Created internal documentation for 10+ troubleshooting workflows, reducing average resolution time for common incidents.

PROJECT EXPERIENCE

FacturaIQ — Billing Analytics Dashboard · *React · TypeScript · Node.js/Express · PostgreSQL · JWT · Docker · Railway/Render · GitHub Actions*

- Built a full-stack billing analytics platform that ingests uploaded CSV files and renders interactive KPI dashboards and automated reports for business intelligence.
- Implemented JWT-based authentication with user registration, login validation, protected routes, and role-ready architecture — supporting future multi-tenant scaling.
- Developed RESTful API on Node/Express connected to PostgreSQL (Neon cloud), with environment variable management and production-grade security (bcrypt/JWT).
- Engineered dynamic CSV upload with automatic column detection and data normalization, handling inconsistent input schemas across multiple data sources.
- Architected modular frontend (Auth, ProtectedRoute, Dashboard, Upload, DataContext) enabling maintainable separation of concerns and component reuse.

Background Remover — Computer Vision Web App · *React · TypeScript · Node.js · Python · ONNX Runtime · rembg · Docker · REST API · Streamlit*

- Developed full-stack computer vision application for automated image background removal using a pre-trained ONNX segmentation model, deployed via Docker on cloud infrastructure.
- Designed RESTful backend API handling image upload, validation, preprocessing, ML inference execution, and output delivery in a layered modular pipeline.
- Built responsive React frontend with real-time image preview and secure file download functionality.
- Created standalone Streamlit version for local ML deployment with dependency validation, exception handling, and in-memory processing to minimize inference latency.

Hand Gesture Detection · *Python · OpenCV · MediaPipe · NumPy*

- Implemented real-time hand landmark detection and gesture tracking using MediaPipe and OpenCV on live video streams.
- Designed a processing pipeline separating frame capture, landmark detection, and visualization layers; optimized with NumPy for real-time performance.

CRC/USD Currency Converter API · *Python · Flask · REST API · Render · HTML/CSS/JavaScript*

- Built and deployed a RESTful Flask API fetching real-time USD–CRC exchange rates from an external financial service, with error handling for API failures and invalid responses.
- Integrated backend with a responsive frontend via GitHub Pages; configured environment-based production settings on Render.

EDUCATION

Bachelor's Degree — Data Science Engineering | LEAD University (ULEAD) *May 2025 – Expected 2027*

Relevant coursework: Data Structures, Relational Databases, Statistics, Software Engineering, Machine Learning Fundamentals

Technical Degree — Software Development | CTP Francisco J. Orlich *2020 – 2022*

CERTIFICATIONS

DataCamp — Python Data Analyst Track

DataCamp — SQL for Data Analysis

Cisco Networking Academy — Introduction to Python Programming

INA — Software Quality Controller · Intermediate English · Spreadsheet Creation

LANGUAGES

Spanish: Native | **English:** Professional Working Proficiency (B1) — actively improving
