YORDIN HERRERA BORGE

Data Science Engineer | Full-Stack Developer

Naranjo, Costa Rica · +506 6258-1978 · borge.yordin@icloud.com · Portfolio · LinkedIn · GitHub

PROFESSIONAL SUMMARY

Data Engineer and Full-Stack Developer with hands-on experience building ETL pipelines, RESTful APIs, and production-deployed web applications. Proficient in Python, PostgreSQL, Docker, and React/TypeScript. Designed and deployed cloud-hosted systems integrating JWT-secured backends and ML inference pipelines. Pursuing a B.S. in Data Science Engineering at LEAD University (expected 2027), seeking an entry-level or internship role in data engineering or backend development.

TECHNICAL SKILLS

Languages	Python (advanced), JavaScript/TypeScript, SQL, HTML/CSS, Bash
Data Engineering	ETL Development, Data Validation, Pandas, NumPy, Structured Logging, CSV/JSON Processing
Databases	PostgreSQL (queries, joins, aggregations, relational modeling), SQL optimization, Neon (cloud)
Backend & APIs	FastAPI, Flask, Node.js/Express, REST API design, JWT authentication, bcrypt, Modular Architecture
Frontend	React, TypeScript, Vite, Tailwind CSS, Streamlit
Cloud & DevOps	Docker, Render, Railway, GitHub Actions (CI/CD), Git & GitHub
Machine Learning	ONNX Runtime, MediaPipe, OpenCV, ML inference pipelines, rembg (U2Net)
Methodologies	Agile/Scrum (academic), RESTful design, Modular architecture, Environment-based config

PROJECT EXPERIENCE

FacturaIQ — Billing Analytics Dashboard *React · TypeScript · Node.js/Express · PostgreSQL · Docker · JWT · Railway/Render · GitHub Actions*

- Built a full-stack billing analytics platform ingesting CSV files and rendering interactive KPI dashboards and automated reports for business intelligence.
- Implemented JWT-based authentication with user registration, login validation, protected routes, and role-ready architecture supporting future multi-tenant scaling.
- Developed RESTful API on Node/Express connected to PostgreSQL (Neon cloud) with production-grade security (bcrypt/JWT) and environment variable management.
- Engineered dynamic CSV upload with automatic column detection and data normalization, handling inconsistent schemas across multiple data sources.
- Architected modular frontend (Auth, ProtectedRoute, Dashboard, Upload, DataContext) enabling clean separation of concerns and component reuse.

Background Remover — Computer Vision Web App *React · TypeScript · Node.js · Python · ONNX Runtime · rembg · Docker · Streamlit*

- Developed full-stack computer vision application for automated image background removal using a pre-trained ONNX segmentation model, deployed via Docker on cloud infrastructure.
- Designed layered RESTful backend handling image upload, validation, preprocessing, ML inference execution (rembg/U2Net), and output delivery.

- Built responsive React frontend with real-time image preview and secure file download.
- Created standalone Streamlit version for local ML deployment with in-memory processing to minimize inference latency.

Hand Gesture Detection *Python · OpenCV · MediaPipe · NumPy*

- Implemented real-time hand landmark detection and gesture tracking on live video streams using MediaPipe and OpenCV.
- Designed processing pipeline separating frame capture, landmark detection, and visualization layers; optimized with NumPy for real-time performance.

CRC/USD Currency Converter API *Python · Flask · REST API · Render · HTML/CSS/JavaScript*

- Built and deployed a Flask RESTful API fetching real-time USD/CRC exchange rates from an external financial service with full error handling.
- Integrated backend with a responsive frontend via GitHub Pages; configured environment-based production settings on Render.

WORK EXPERIENCE

IT Support Technician | Librería Cristal *Jan 2022 – Present*

- Delivered Tier 1 and Tier 2 technical support for 15+ workstations, maintaining system uptime across all critical hardware.
- Reduced equipment downtime by an estimated 20% through scheduled preventive maintenance of desktops, laptops, and printing systems.
- Designed and installed network infrastructure (routers, switches, Ethernet cabling) for a multi-workstation environment.
- Configured server settings, IP addressing, and network segmentation; created internal documentation for 10+ troubleshooting workflows.

EDUCATION

B.S. in Data Science Engineering | LEAD University (ULEAD), Costa Rica *May 2025 – Expected 2027*

Relevant coursework: Data Structures, Relational Databases, Statistics, Software Engineering, Machine Learning Fundamentals

Technical Degree in Software Development | CTP Francisco J. Orlich, Costa Rica *2020 – 2022*

CERTIFICATIONS

- **DataCamp** — Python Data Analyst Track
- **DataCamp** — SQL for Data Analysis
- **Cisco Networking Academy** — Introduction to Python Programming
- **INA** — Software Quality Controller · Intermediate English · Spreadsheet Creation
